

Our Fabricating Strengths Have NO LIMITS! Tiffin Metal Products' strength is being able to develop your product from concept to delivery.

ENGINEERING

Our engineers thrive on challenging projects and have the desire to provide innovative solutions for your applications.

- Collaborative effort to develop product
- Involvement from initial idea to final product
- 3-D Modeling
- Customize standard product to suit requirements

- Our laser cutting, sheering and turret punching machines allow us to cut parts up to 13' long and 1/2" thick mild steel

- Our punching equipment allows us to punch and emboss parts up to 13' long and 1/4" thick

FORMING

- We have a wide variety of press brakes, panel benders and folding equipment with varying levels of automation
- Maximum length 166" and up to 1/4" mild steel

- With over 12,000 square feet of dedicated welding space, we have extensive MIG, TIG and spot welding capabilities

FASTENING

- Our PEM Inserter gives us the capability to attach nuts and threaded studs in materials up to 10 gauge

- Our state-of-the-art automated powder coating booth allows in-house powder coating of parts up to 14' long, 72" tall and 39" wide

ASSEMBLY

- Assembly of product includes packaging, testing, bar coding, date coding, inspection, serialization, documentation and warehousing if required
