

Reliable innovation.
Personal solutions.

Our customers' trust as a goal

Ormazabal is a strategic supplier to the main utilities worldwide. Our priority objective is to gain their trust, along with that of the industrial, infrastructures and services and renewable energy sectors, as well as other indirect customers.

Our service is based on a collaborative relationship with our customers and partners, to whom we offer our own technology and innovation, while providing extensive experience and knowledge. Without doubt, the best way to move forward is to grow together.

All this is possible thanks to the involvement of a highly-qualified team and our close relationship with our customers via an extensive network of commercial offices and manufacturing sites, as well as local partners worldwide.

1967

Committed to technology since 1967

"Your ear must be pressed to our customers" one of the most repeated phrases by Javier Ormazabal Ocerin, founder of **Ormazabal**. Our objective is to offer local solutions aimed at responding to their real needs, going beyond the mere products.

At **Ormazabal** we are celebrating our first 50 years of history. A lifetime that can be written in parallel to the evolution of our technological achievements and innovations. An innovative spirit that reaches throughout the entire organization, to which everyone who makes up **Ormazabal** is dedicated.

Innovation has been the driving force for our growth and that of our customers. Our company is committed to people, those who make up **Ormazabal** and those who make up our society and environment.

From our beginnings in 1967 to the present, we have grown steadily in a continuous process of internacionalization. A global presence that relies on essential pillars such as in-house technological developments, knowledge management, local solutions and the establishment of strong relationships with our customers. The milestone of **Ormazabal's** 50th anniversary serves as a guide and motivation towards a horizon full of challenges and enthusiasm with our values as basis: Flexibility, Leadership, Pragmatism and Support.

1985

As a global supplier of solutions for the distribution network, we contribute to the responsible and sustainable use of electric power.

1992

Electrical energy moves us

Ormazabal is one of the leading companies worldwide providing high added value products and services for the electrical network.

Our commitment to the reliability of our developments and our deep knowledge of the sector and the markets where we are present enables us to respond to the present and future needs of the electrical network, contributing to its development with innovative solutions and in-house technology.

Since 1967, innovation has been the driving force for our growth and that of our customers. All the people that make up **Ormazabal** are dedicated to this objective. Our highly-qualified team of professionals engages with our customers with whom we establish long-term relationships with mutual benefits.

An experience that places us at the forefront of the electrical sector.

Innovation is part of our DNA

We are a pioneer company with own-technology and innovation as main signs of identity.

Ormazabal's history can be written in parallel to the evolution of our technological achievements. This innovative spirit reaches throughout the entire organization and is part of the company's culture. A fair reflection of this can be seen in the number of registered patents, some of which have resulted in a revolution in the electrical industry. An example of this is **ormalink**: a pioneering system developed in 1992 to connect GIS-type cubicles, facilitating their connection without the need to handle gas in the installation and ensuring reliable electro-mechanical continuity.

Our Research and Technology Centre (CIT) has the aim to identify, acquire and distribute state-of-the-art technologies within our organization, and to give birth to new developments. This commitment to R&D&I was strengthened in 2008 by the launch of the High-Power Laboratory (HPL), the most modern in the world since then.

In addition, since 2014, our CIT has new capabilities: UDEX, **Ormazabal's** Demonstration and Experimentation Unit.

Our highly qualified and focused team of innovation motivated professionals have developed our own products and solutions during our more than a century long consolidated history.

2000

The high-power laboratory (HPL) gives us the capability to test and homologate high voltage equipment in conditions up to 2,500 MVA.

With more than 15 km of underground cable and 450 m of overhead line, UDEX consists of a unique medium voltage experimentation network, highly configurable and independent from the grid, allowing the development and testing of new technologies, products & services in a safe and controlled environment.

A company with a global focus

We are a company with global focus. From our beginnings, **Ormazabal** has not stopped growing and increasing our global presence, highlighting our ability to adapt to different markets and contexts.

We want to be close to our customers, supporting them with technology and solutions that adapt to the characteristics and needs required by the local markets. This enables us to be present in a growing number of countries where we carry out our own implementation through sales offices, manufacturing sites and a nurtured network of local collaborators.

Our continuous internationalization process responds to a policy of sustained growth supported by essential pillars such as technological development, knowledge management, local solutions and the establishment of strong relationships with our customers.

Our close relationship with our customers and deep knowledge of the electrical business are the keys to success that enable us to offer solutions based on high added value products and services.

2007

Flexible and effective solutions

We believe that excellence does not lie solely in offering effective products and services, but also in the ability to respond to individual requirements and demands.

We develop tailor-made projects for our customers for efficient energy distribution with medium voltage Primary and Secondary Distribution equipment and solutions.

Our products respond to a broad range of business segments such as public distribution, infrastructures (airports, ports, railways...), industries (oil, mining, gas...), services (residential, leisure...) and renewable energies.

We provide turnkey engineering solutions. Our service includes our presence and collaboration throughout the entire process: technical assistance, engineering, purchasing process, procurement, installation, commissioning, after-sales service, maintenance and training.

Committed to people and our environment

We are a company engaged with people. With the people who make up **Ormazabal** and also with those in our society and our social environment.

Our business strategy includes the respect and protection of rights as an essential part of our culture and it drives us to promote these values in our scope of influence. Along these lines, **Ormazabal** collaborates with UNICEF in its work for the protection of children's rights.

The Environment is also an essential part of **Ormazabal's** strong commitment to the areas where it is present, through the use of responsible technologies and initiatives that promote and facilitate its protection.

Ormazabal promotes an entrepreneurial culture that puts the focus of attention on the development of people and the protection of the environment. Because the development of tomorrow depends on what we do today.
